# Inspiration can come from anyone /This is Why we connect with everyone with Sharp's Touch Display Link.

SHARE. COLLABORATE. COMMUNICATE.

Smarter working with Touch Display Link 2.0

Touch Display Link 2.0*[1] software supports affective and multifaceted communication. Onscreen content – including handwritten notes and drawings made in real time can be viewed simultaneously on the BIG PAD and mobile devices*[2] such as PC's, tablets and smartphones.

Versatile and simple

Touch Display Link software comes pre-installed on the PC which is embedded into the BIG PAD display*[3]. Meeting participants will need to visit the Apple App and Android App stores to download the free app to their device. In the meeting they use their Wi-Fi search tool to simply connect to the BIG PAD pen software and link their device to the screen. With many employees bringing their own technology to work, they can easily use their devices to connect to the BIG PAD and collaborate. Helping to facilitate interactive presentations, lively discussions, and paperless meetings in both business and educational settings Touch Display Link encourages sharing, collaborating and open communication.

Write, share and collaborate for more engaging meetings.

Make the most out of your investment in Sharp's BIG PAD interactive displays. Touch Display Link enables the following interactive functions on BIG PAD and mobile devices connected via wireless LAN:

- Sharing of onscreen content
- Transfer of files
- Interactive onscreen writing and drawing
- Remote control of the BIG PAD from mobile devices

Up to 50 mobile devices*[1] *[4] can be connected simultaneously.

Files can be exchanged between mobile devices even if they are not connected to the BIG PAD. Users can capture onscreen images and save them on their mobile devices to make personal memos. Touch Display Link can also connect two BIG PADs on the same network (intranet, VPN etc.) to enable large-scale interactive communications.
